Subject: Bovine TB: Switch to different tuberculin

Hello xxxxxxx,

I hope you are still handling requests for information. Obviously if you are not, please let me know.

If you are, I see from Reference 1 in the "Discussions and clarifications" section that in Northern Ireland the change in tuberculin (which I assume was from the Weybridge tuberculin to the Lelystad tuberculin) was made abruptly.

Would you by any chance be able to supply me with the dates over which the two different tuberculins would have been used in the field.

I have looked on the internet for dates but this was not successful.

I apologise if I have missed something obvious.

Regards,

xxxxxxx

Subject: RE: Bovine TB: Switch to different tuberculin

Hello xxxxxx

I'm still here! We started to use Lelystad tuberculin from April 2007, prior to that we used Weybridge.

This seems like a very short response but I hope it answers your question

Best regards

xxxxxx

Subject: Re[2]: Bovine TB: Switch to different tuberculin

Hello xxxxxxxx,

That's great.

Have you any idea how long after April 2007 Weybridge tuberculin continued to be used before stocks ran out or shelf life got exceeded?

Sorry if this is a stupid question.

Regards,

xxxxxxx.

Subject: RE: Re[2]: Bovine TB: Switch to different tuberculin

Hi xxxxxxxx

No, it isn't a stupid question. We recalled and disposed of any remaining Weybridge tuberculin and then started to use lelystad, so there wasn't a period when both tuberculins were in use at the same time.

Regards

xxxxxxx
