(Compiled by www.bovinetb.info)

Notes

Natural England is the competent authority for badger control licensing for the purpose of preventing the spread of bovine TB.¹⁹ Numbers of badgers removed shown in the above table are numbers reported to Natural England. Natural England does not receive carcasses; it only receives data on the number of badgers dispatched (Internal Review - RFI 4609). All the above implies that the data presented in the above table have not been independently verified by Natural England and, in view of the responsibility which has been assigned to Natural England, by any public authority.

The Department for Food Environment and Rural Affairs has stated that there is accumulating evidence that the reported numbers are low.¹⁹ Indeed, for 43 of the 372 years and zones shown in the above table, failure to reach the advised minimum have occurred. This is 12%. Also, 9 of the first 10 cull zones (90%) have failed to reach the minimum for at least one year. No breaches of the advised maximum have occurred for any year in any cull zone.
