Subject: Information request: Incidence of TB reported in domestic animals on farms

Dear Sir/Madam,

At

<http://www.defra.gov.uk/animalh/tb/abouttb/otherspecies.htm>

it says

"Under the Tuberculosis (England) Order 2007, farmed mammals or mammals kept as pets affected with, or suspected of being affected with, tuberculosis are notifiable to the Divisional Veterinary Manager (DVM) of the local Animal Health Divisional Office."

How many incidences of pets infected with TB were recorded in 2008? Please specify this according to species. For instance please distinguish between incidences reported for dogs and cats.

If you are unable to reply promptly, a confirmation of receipt would be appreciated.

All responses by email will be fine.

Yours faithfully,

....
