Subject: RE: Response to request for information on testing and compensation

Hi

I can only provide the data you want from 2005/06 onwards. Prior to that testing costs were bundled under disease control costs that included epidemiological investigations, compliance, maintenance of databases, laboratory services and management of reactors as well as the cost of testing cattle.

The data for 2005/06, 2006/07 and 2007/08 is attached.

Just a reminder that the M.bovis conference is being held in New Zealand. If you want to gain a deeper insight into Tb and then see how the New Zealand programme works, I strongly recommend that you come to the M. bovis conference. The link to the M. bovis website is:

<http://www.mbovisconference.org/>

Regards,
